The History of the Original Snake:

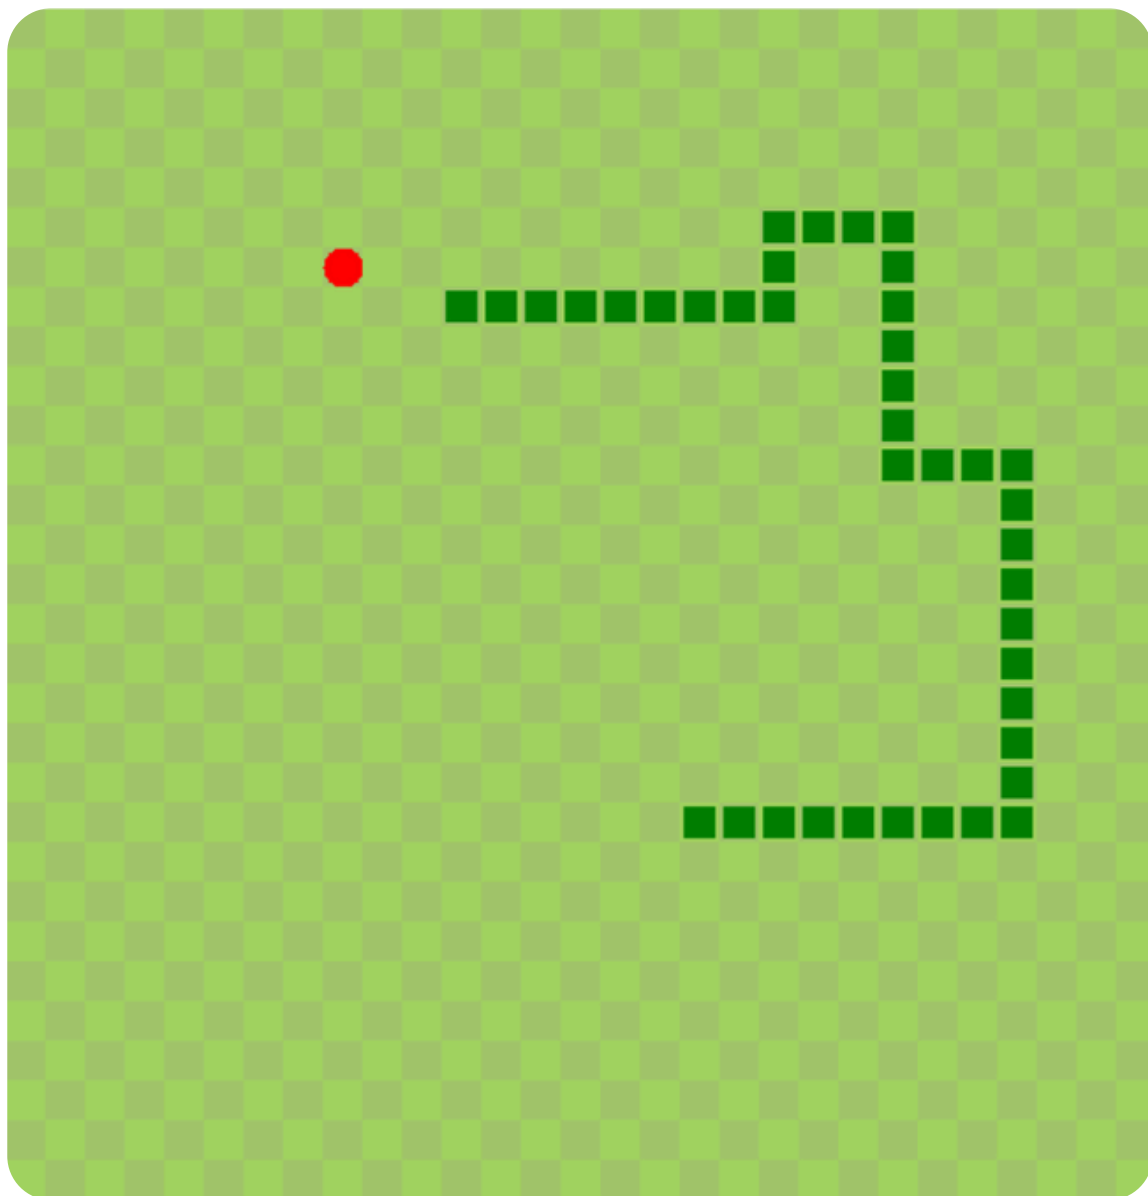

The Snake game that we love today started out as Blockade, an arcade video game published by game manufacturer Gremlin Industries. This game led to some other titles such as "Dominoes" and "Surround". But these were also arcade games. The original Snake game was first introduced in the year 1997 on Nokia devices and since then it became a staple game during the early days of mobile phones. The Nokia 6110 was the first Nokia phone to include the game. The game was programmed by Taneli Armanto, a user interface software design engineer at Nokia. Fast forward to 2013, Google surprised its users by featuring a playable version of the classic game on its homepage. Users can play the game directly on the homepage without needing to download or install anything, making it easily accessible to anyone with an internet connection.

Objective of the Game

(Single Player):

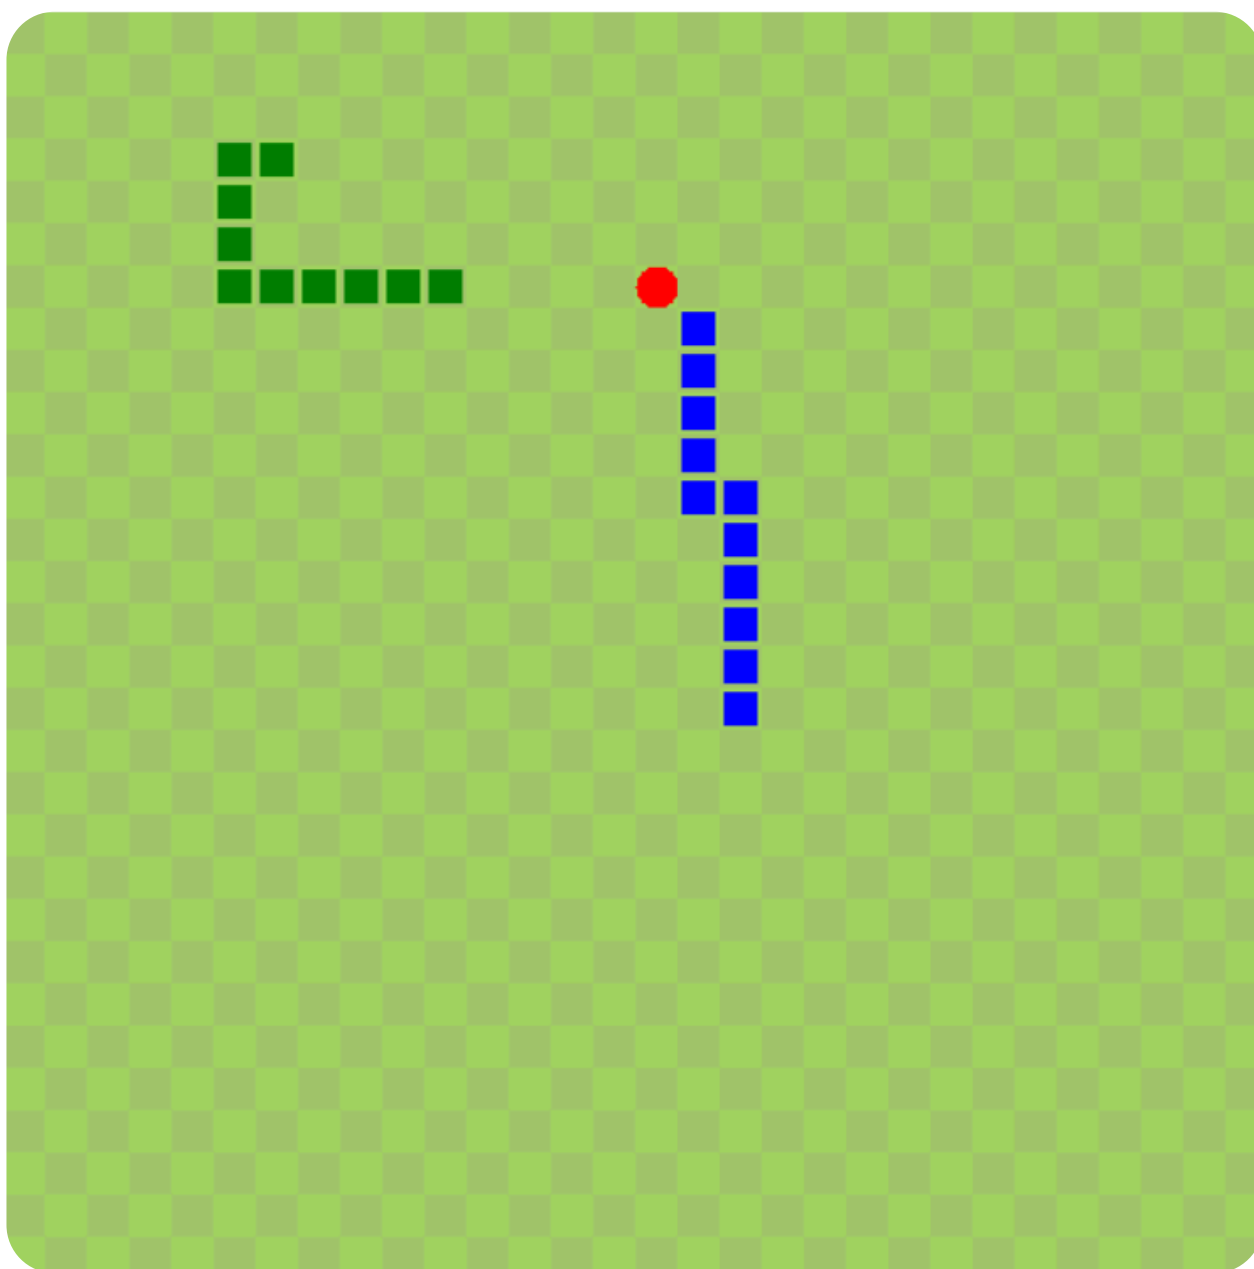

To play the Snake game in solo mode, you use the WASD keys to move the snake around the playing area. As you find food, your snake can eat it to grow larger. The game ends when the snake either moves off the boundaries or collides with self. The goal is to make the snake as large as possible before that happens. When you start your game in this mode the snake first appears in the middle of the grid. To make the snake move faster different speeds can be selected before the game starts.

Objective of the Game

(Two Player):

To play the Snake game in two player mode, player one uses the WASD keys and player two uses the IJKL keys to move their snake around the playing area. Both players compete to collect apples, grow their respective snakes and increase the probability of player 2 running into player 1's body or vice versa. Each player has the freedom to utilize any strategy they want, but to win the game, only one straightforward objective must be achieved, simply outlast your opponent.

The Controls

Solo Mode/Player One

To move Snake

W - Up
A - Left
S - Down
D - Right

Player 2

To move Snake

I - Up
J - Left
K - Down
L - Right

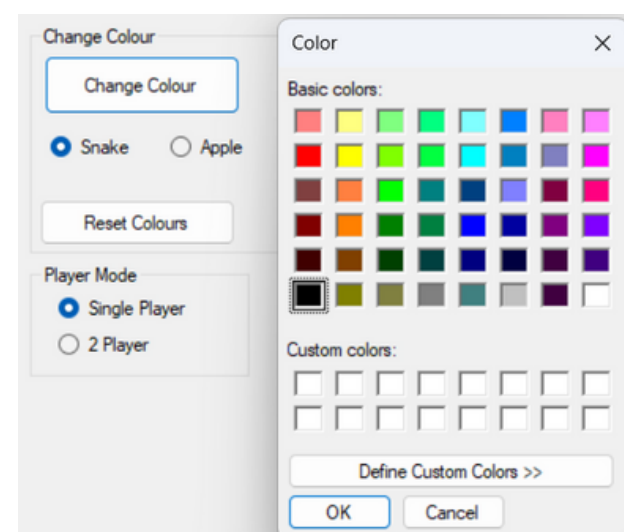

The Basics

Colour Change

- Snake Colour
- Apple Colour

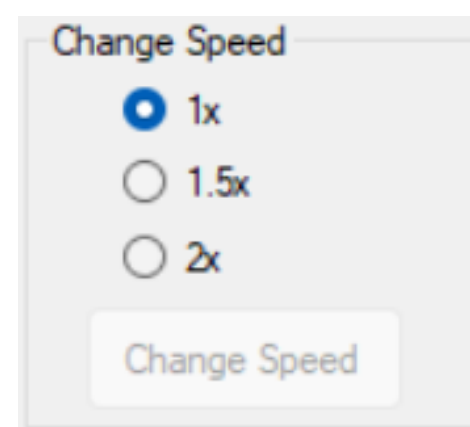

*When 2 Player mode selected, player 2 can change their snake colour.

Change Speed

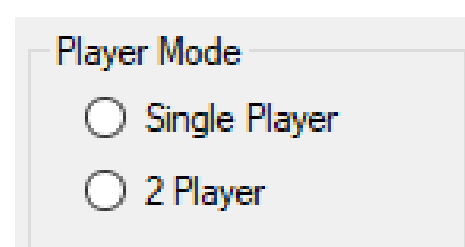

Changing speed will change the speed of the game.

- 1x (Default Speed)
- 1.5x (50% Faster)
- 2x (Double Speed)

Change Mode

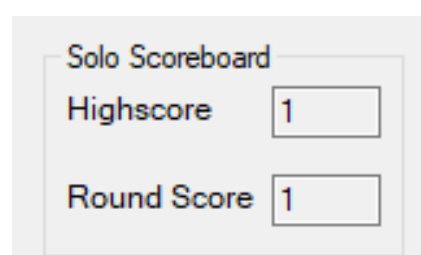

Single Player/2 Player

Scoreboard

Single Player

Roundscore is the points you get for each apple you eat during that round

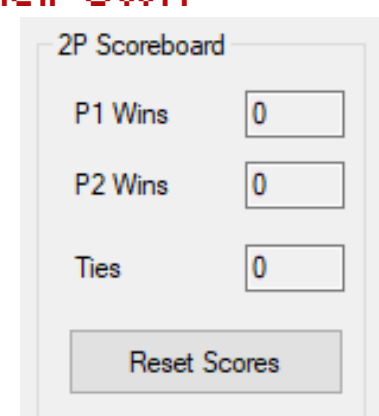

Highscore is the most you've ate in one round

Two Player

Each player has their own wins and their collective ties.

Players can choose to clean their scoreboard.

How to Play:

1) Start by selecting your mode:

- Single player
- Two player

Player Mode

- ☐ Single Player
- ☐ 2 Player

2) Select the game **speed**:

Default, 50% faster, or DOUBLE!!

Change Speed

- ☒ 1x
- ☐ 1.5x
- ☐ 2x

Change Speed

3) Change your **snake** or **apple colour**, or keep the default!

Change Colour

Change Colour

- ☐ Snake ☐ Apple
- ☐ Snake P2

Reset Colours

4) Once you're ready, press **start**.

Eat as many apples as you can without hitting the edges, yourself, or the other player! You can hit **pause** if you need a break.

Start

Pause

5) (For Solo) When "**Game Over**" is achieved, you will get a "**Round Score**".

If your round score is higher than your best score, you get a new **high score** and gets **saved automatically**!

Solo Scoreboard

Highscore 16

Round Score 8

Game over!

OK

5) (For 2 Player) When "**Game Over**" is achieved, the **winner** will get a **point** added to their **scoreboard**! If it's a **tie**, the **collective tie** will get a **point**.

2P Scoreboard

P1 Wins 2

P2 Wins 2

Ties 1

Reset Scores

6) Press **reset** to keep playing!

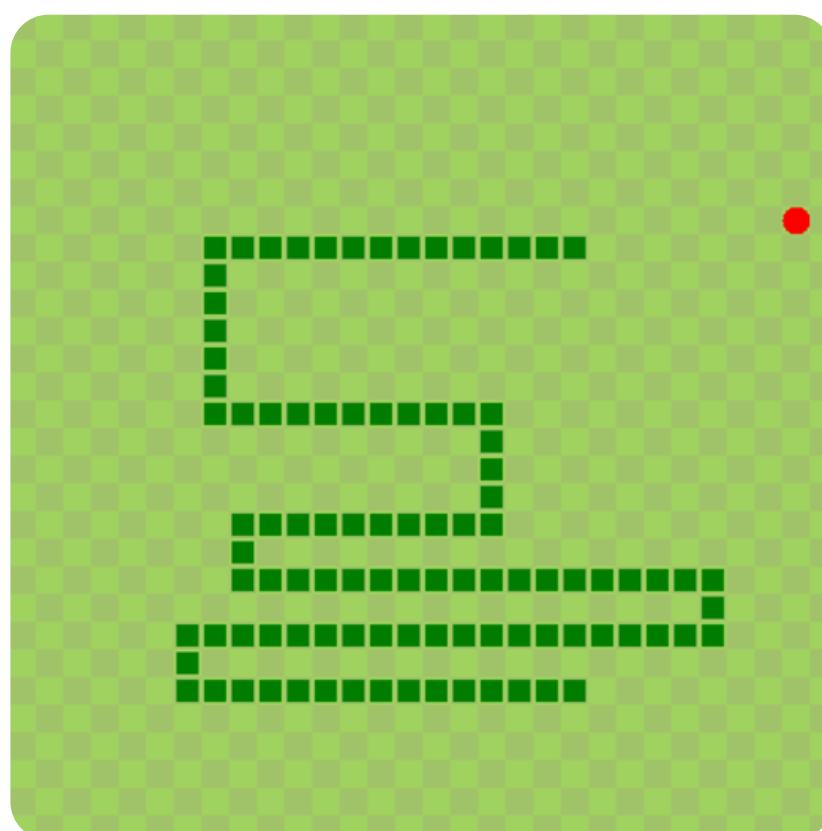

Reset

Game Over Conditions

Single Player

Win

Solo mode does not have a formal "win" condition but rather a high score challenge. Your goal is to surpass your previous high score by collecting as many apples as possible. Each apple increases your snake's length, and your score increases by one point for each segment added to your snake.

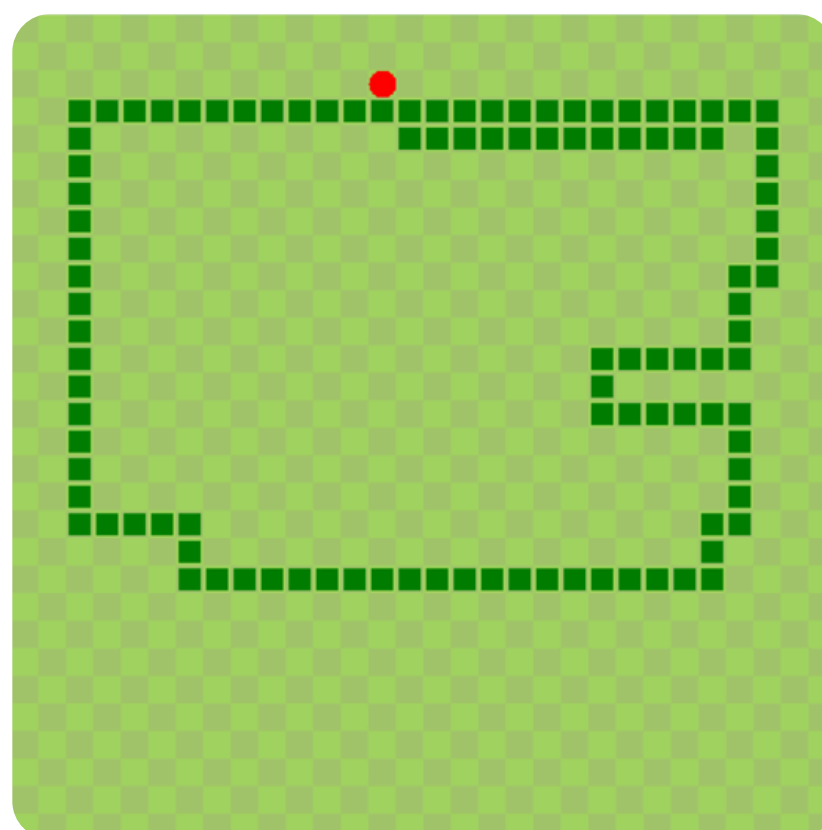

Loss

The game ends if any of the following happens:

1. Your snake collides with itself.
2. Your snake moves out of the grid's boundaries.

A "Game Over" message is displayed when you lose. Your final score is compared to the all-time high score and it is displayed under the round score section.

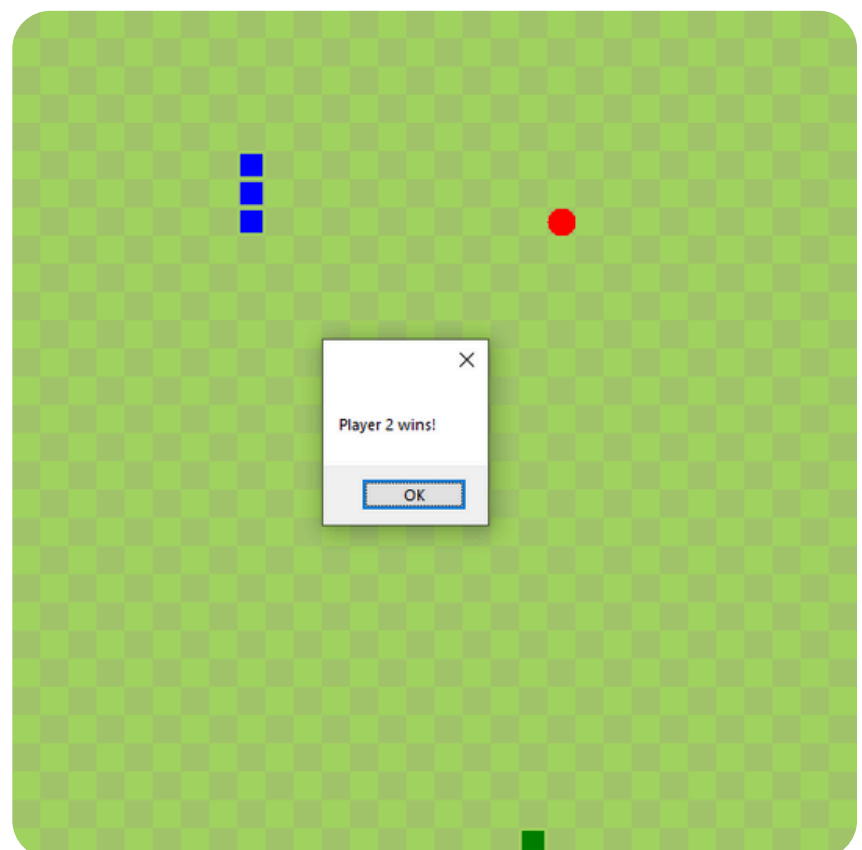

Game Over Conditions

2 Player

Win/Loss

A player wins when their opponent:

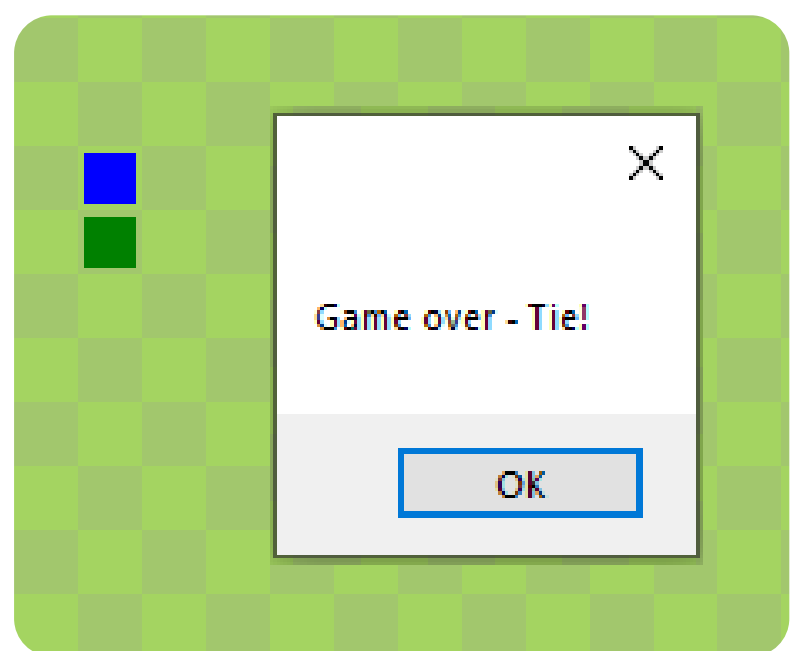

1. Collides with their own snake (self-collision).
2. Collides with the winning player's snake (body collision).
3. Goes out of bounds by moving beyond the grid's edges.

Tie

Both players fail simultaneously due to one of the following:

1. Each collides with their own snake at the same time.
2. Both players crash into each other's snakes simultaneously.
3. Both players move out of bounds at the same time.

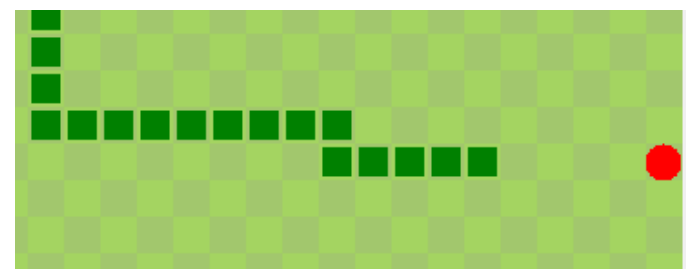

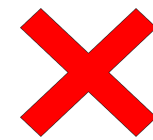

Strategies to Win:

Solo

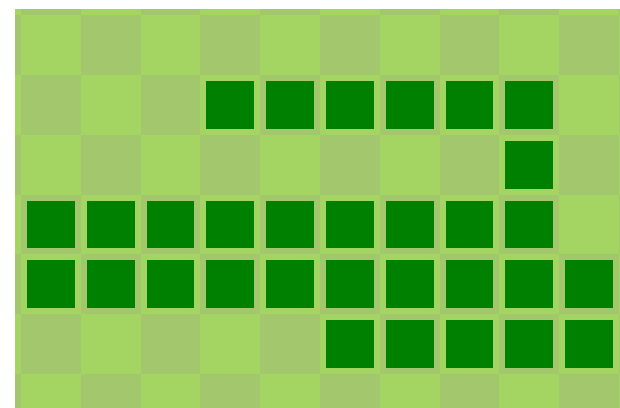

1. Approaching Apples

If an apple has generated anywhere along the edge of the play area, the most optimal strategy is for the user to approach it from the direction parallel to the edge instead of straight-on. This completely eliminates the potential for death due to colliding into the wall.

2. Saving Space

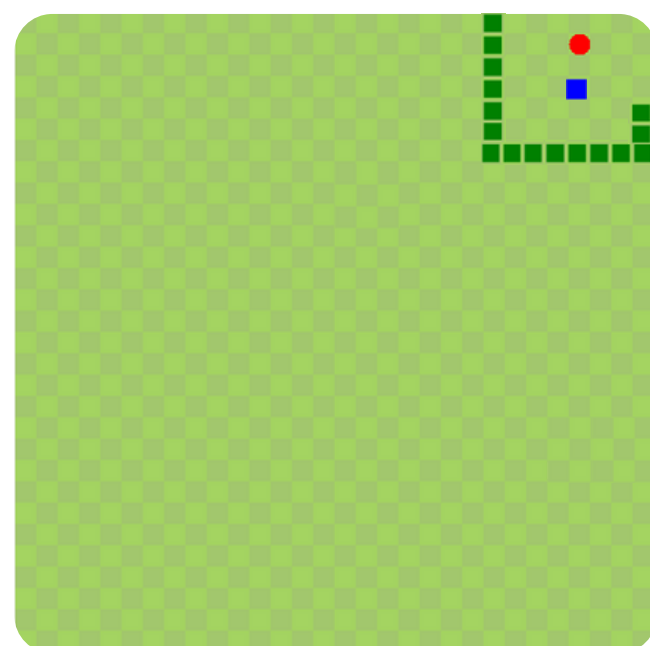

-If your snake is big, going up by one and to the side in increments to the apple will help save space

2 Player

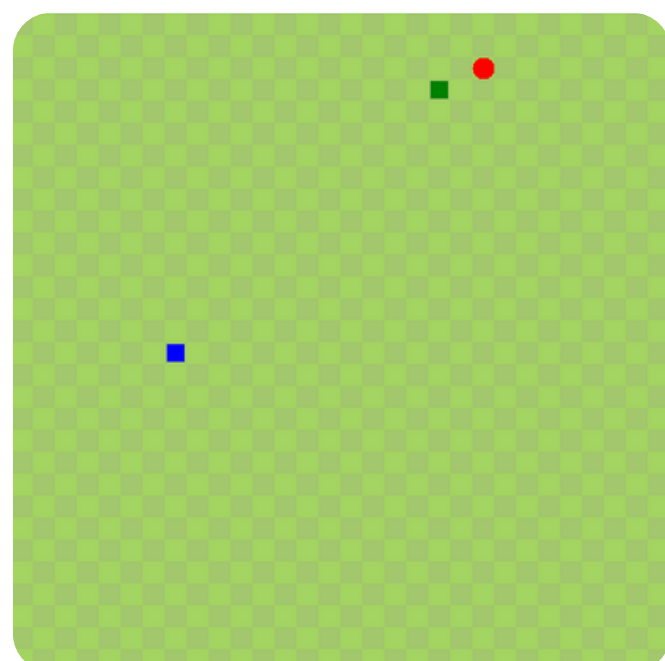

1. Boxing/Cornering/Cutting off your opponent

Encase your opponent within the edge of the map, or surrounding them with a large enough snake of your own to force them into running into you.

2. Space Awareness

If your opponent is closer to the apple than you, stay in the middle to have the best chances on getting the next apple

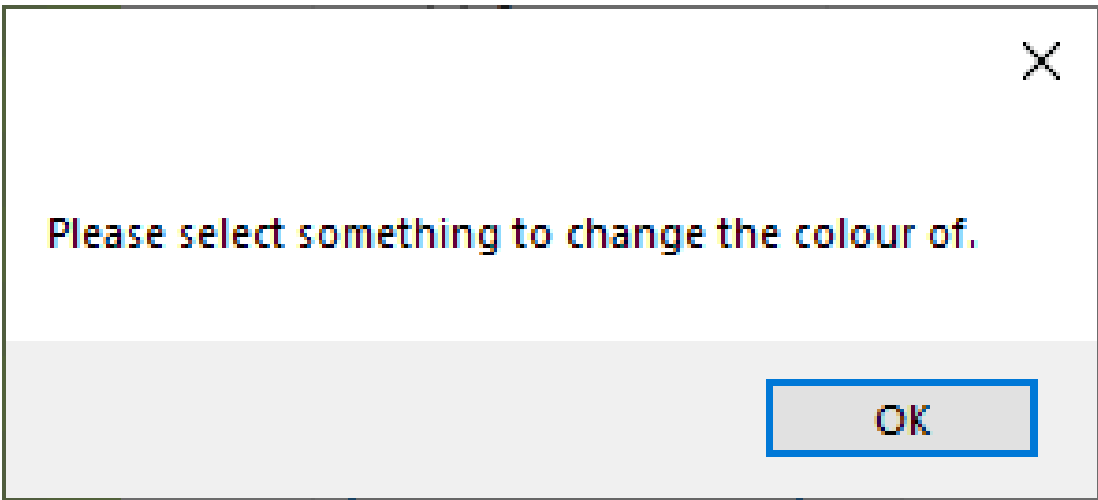

Troubleshooting & Errors

Colour Change

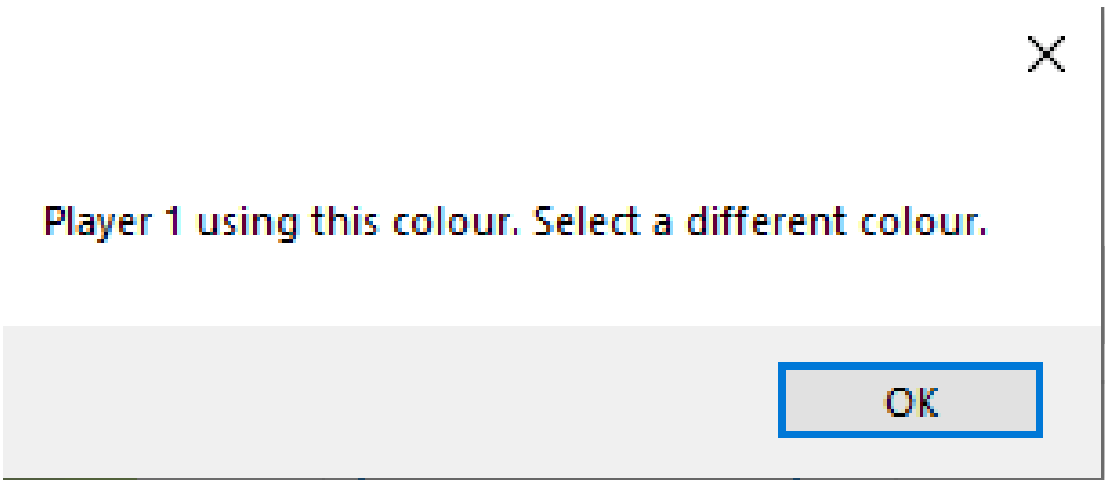

1. Select an object to change the colour of

Make sure you have a snake or apple selected before you try and change the colour.

2. Same colour as opponent snake

If a player has selected a colour, you cannot select the same colour to avoid confusion between the two snakes.

Speed Change

1. Select a speed

Make sure to select a speed to be able to change the mode.
